Montréal, Québec

Professional Profile: Technical problem-solver with strong hands-on experience building automation tools, desktop applications, reporting workflows, and productivity solutions using AI-assisted development. Comfortable turning practical needs into working tools with Python, C#, SQL, PowerShell, HTML/CSS/JavaScript, and modern AI coding assistants. Combines real-world production experience, rapid learning, and a builder mindset to prototype, iterate, and deliver solutions quickly.

AI Tools & Technical Skills:

- AI-assisted development using ChatGPT, DeepSeek, GitHub Copilot, BlackBox, and Tabnine for scripting, prototyping, code generation, debugging, and refactoring.
- Application and tool development with Python, C#, SQL, PowerShell, HTML/CSS/JavaScript, and WPF.
- Automation, ETL-style workflows, reporting systems, CSV/data processing, and productivity tooling.
- Strong problem-solving mindset with the ability to learn quickly, work with incomplete instructions, and turn ideas into working solutions.
- Experience building practical tools for daily operational needs, data analysis, troubleshooting, and workflow simplification.
- Comfortable collaborating across technical teams and using AI to compare, validate, improve, and accelerate solutions.

AI & Machine Learning Training

- **DeepLearning.AI — AI for Everyone (Coursera)**
- **Mathematics for Machine Learning and Data Science Specialization (Coursera)**
 - Linear Algebra for Machine Learning
 - Calculus for Machine Learning
 - Probability & Statistics for Machine Learning
- **Machine Learning Specialization (Coursera)**
 - Supervised Machine Learning: Regression & Classification
 - Advanced Learning Algorithms
 - Unsupervised Learning, Recommenders & Reinforcement Learning
- **Generative AI for Software Development Professional Certificate (Coursera)**
 - Introduction to Generative AI for Software Development
 - Team Software Engineering with AI
 - AI-Powered Software and System Design

Selected Projects:

Metadata Analyzer for 200+ Servers — Built a Python-based metadata processing and reporting workflow to analyze infrastructure and database audit outputs across a large MySQL/MariaDB server estate. Normalized folder structures, aggregated CSV data, generated dashboards, and highlighted modernization risks, storage patterns, and upgrade opportunities for decision-making.

Excel Report Automation with AI Assistance — Built a reporting workflow using ChatGPT, Python, PowerShell, SQL Server, CSV files, and Excel automation to extract data, transform it, apply formatting, and deliver reports automatically to a shared network location.

CSV-to-Database Automation using SSIS — Created an SSIS package with ChatGPT support to process daily CSV files, clean and transform fields, standardize timestamps and filenames, handle missing values, and load structured data into SQL Server tables for downstream processes.

Time & Task Management Application — Designed and built a usable personal productivity application for task tracking, reminders, sticky notes, calendar integration, and Pomodoro-style time management. Built in WPF for daily use, with additional HTML/CSS/JavaScript and React-based versions under review and development.

Modular WPF Productivity Suite — Built version 1.0 of a C#/WPF desktop shell application designed to host multiple modules such as calendar, to-do, notes, contacts, and dashboard views. The project focused on modular architecture, UI organization, desktop application design, and maintainable project structure.

Languages:

Bilingual / Native-level proficiency: French, English, and Spanish.

Basic knowledge: Russian and Romanian.

Education:

Bachelor's Degree in Computer Science — Universidad Albert Einstein (2011)

Certificate in Visual Studio Programming — Instituto Tecnico Centro Americano (2007)

Artificial Intelligence Certificate — Coursera / DeepLearning.AI (in progress)

Python, Full-Stack, and Artificial Intelligence Training — Codecademy and freeCodeCamp (in progress)

Professional Experience:

Fondaction, Montréal, Québec

Role: Database Administrator (DBA)

Period: Jan. 2024 — Present

- Manage and optimize SQL Server production environments, troubleshoot issues, and improve reliability in a critical business setting.
- Build automation and reporting scripts with PowerShell and SQL to reduce manual work and support operational visibility.
- Review SQL code, collaborate with technical teams, and contribute to better observability and maintainability.
- Use tools such as Dynatrace and Confluence to support monitoring, documentation, and continuous improvement.
- Documentation des processus et procédures dans Confluence.

Environnement technologique : SQL Server 2019, PowerShell 7, Dynatrace, Confluence.

TS Imagine, Montréal, Québec

Role: Database Administrator (DBA)

Period: Feb. 2022 — Dec. 2023

- Administered and supported multi-technology database environments across on-premise and cloud platforms.
- Automated recurring administration and troubleshooting tasks using Bash, Python, and scripting tools.
- Worked with developers and system administrators to resolve performance, replication, and operational issues.
- Contributed to documentation, support, and continuous improvement in a fast-paced international environment.

Environnement technologique : MariaDB, SQL Server 2019, Python, Bash, Confluence.

Ubisoft Entertainment, Montréal, Québec

Role: Database Administrator (DBA)

Period: Apr. 2016 — Jan. 2022

- Supported large-scale database environments across multiple technologies, focusing on reliability, performance, and operational stability.
- Built and used automation, monitoring, and reporting tools to simplify recurring tasks and improve visibility.
- Collaborated closely with developers, architects, and infrastructure teams on troubleshooting, SQL review, and platform improvements.
- Worked on data quality, migrations, system support, and process improvement in a high-demand production environment.

Environnement technologique : MySQL, PostgreSQL, Redis, SQL Server, Python, Bash, PowerShell, Zabbix, Grafana, Kibana, Elasticsearch, Confluence.

Nova DBA, Brossard, Québec

Role: Database Administrator (DBA)

Period: Aug. 2015 — Jan. 2016

- Worked on ETL resources, reporting solutions, and database development across SQL Server and Oracle environments.
- Contributed to client software development and database migrations, maintenance, backup, and restoration tasks.
- Supported indexing, storage management, and high-availability related administration activities.

Environnement technologique : SQL Server 2014, MySQL, PostgreSQL, PowerShell, Confluence.
